NEODENT.
A Straumann Group Brand

Quality of Life Starts with Your Smile

Smiling, quite simply, makes us happy and lowers the levels of hormones associated with stress.

Teeth loss can impact that on many aspects, such as:

Esthetics
and self-esteem

Teeth movement
and speech

Chewing and even
digestive difficulties

Dental implants are now the standard treatment for missing teeth, and Neodent provides solutions that can help a wide variety of patients, improving:

Functionally: Eating, drinking, talking, and smiling.

Physically: Preserve bone, gum, adjacent teeth and facial structure.

Socially: Enable worry-free smiling, talking, and laughing.

Emotionally: Boost self-esteem and confidence.

Pleasurably: Enjoy foods again, no slippage or irritation.

Reasons for Tooth Loss

Everyone can be at risk for tooth loss at any stage of life. Neodent can help restore smiles regardless of the reason for the loss.

Here are some reasons why people lose teeth:

Healthy People

Healthy people may experience tooth loss from accidents, trauma, or genetics.

Aging People

Aging process affects teeth and gums, with untreated gum disease, long-term tooth decay, and other medical conditions increasing risks for seniors.

Dental Health Issues

Poor oral hygiene, including gum disease, tooth decay, inadequate nutrition, and lack of dental care, can lead to cavities, plaque buildup, and inflammation, ultimately causing tooth loss if left untreated.

Gum disease and Bruxism

Gum disease and bruxism are common causes of tooth loss, as they damage the gums and wear down tooth enamel, respectively. These conditions should be treated with dentist supervision and proper care.

YOU LOST A TOOTH, WHAT NOW?

Missing one, multiple, or all your teeth, Neodent has a solution to restore your smile, confidence and quality of life. Here are some answers to questions you might have as you get started:

A missing tooth

Multiple teeth missing

All teeth missing

What should I expect from my procedure?

At first, the dentist assesses your condition, including history and dental examination. Discusses treatment plan options and choose the appropriate implant type.

Is it safe?

When performed by a trained and experienced clinician, dental implant surgery is one of the safest and most predictable procedures in dentistry.

What should I expect in the long-term?

Dental implants last years, even a lifetime with care. Dentists use them for missing teeth, with improving technology.

How much will it cost?

Every patient is different, costs vary based on how many teeth and implants will be needed. Your dental team can provide an estimate tailored to you.

Will it hurt?

As with any surgical procedure, there may be some discomfort. Your surgeon will assist you before, during, and after surgery to help keep you as comfortable as possible.

TAKING CARE OF YOUR NEW SMILE

POST-OP CARES

1. Right after the procedure

Cool the treated area with ice to reduce swelling and take the pain medication prescribed by your dentist.

2. Oral care

Avoid brushing the implant area and using oral rinses until the stitches are removed to prevent bleeding.

3. At mealtimes

Don't eat until the anesthetic wears off. Avoid hot, spicy, acidic, crunchy, and hard foods on the first day. Don't chew on the side with implants.

4. Body Position

Sitting is preferable to lying down. Keep your head elevated during the day and at night. Avoid lying on the side where the implant was inserted.

5. Rest

It is contraindicated to drink alcohol and smoke nicotine. Avoid coffee, black tea, and sports or physical exertion for the first few days after your procedure.

NEODENT: A LONG HISTORY OF HELPING PATIENTS JUST LIKE YOU

Founded by a dentist for dentists with the purpose of changing lives of more patients. Born in 1993, Neodent aims to improve lives with innovative, comfortable, and high-quality solutions, enabling people worldwide to smile again.
